Page 2 of 9

E1  
concl.

selecting, from a plurality of available video content and navigational assets stored on service provider equipment, video content and navigational assets appropriate to said capability level of said STT; and  
providing said selected video content and navigational assets in response to STT communications indicative of a need for said video content and assets, wherein said navigational assets comprise video information, graphics information, and control information.

E2  
SP  
E1

15. (twice amended) The method of claim 10, wherein an initial navigation asset provided to a set top terminal comprises associated control information, said control information being indicative of related navigation assets within said asset data base having associated with them a capability level of said STT receiving said initial navigation asset.

E1

17. (four times amended) In an interactive video-on-demand distribution system including video-on-demand provider equipment coupled to subscriber equipment via a communications network, a method for adapting provided information to a set top terminal comprising the steps of:

E3

- storing video-on-demand information at the provider equipment;
- determining at the service provider equipment, during a video-on-demand session initiation, a capability level of said STT, said determination being made by comparing STT configuration information to a data base of STT capability information; and

providing, to said STT in response to an STT request for information, information comprising navigator assets adapted to said determined capability level of said STT;

each of said set top terminals having a common video information processing architecture, one of a plurality of control architectures, and one of a plurality of graphics processing architectures, wherein said navigator assets are optimized to each of the possible STT capability levels to provide a plurality of
